

Lockheed Martin Team Awarded Passenger Screening Contract By TSA

Protecting the Public and Maintaining Smooth Operations Are Critical Requirements for New Security Screeners

PRNewswire-FirstCall

MARLTON, N.J.

The Lockheed Martin team has been selected by the Transportation Security Administration (TSA) to implement a national contract to train more than 30,000 airport passenger screeners at 429 airports across the country before the end of the year.

Awarded as part of a competitive bid, the goal is to train a new screener workforce that will protect the flying public and maintain the smooth running of the aviation system by the efficient and courteous moving of passengers who represent no threat through security checkpoints. The contract is initially funded at \$25 million, with a potential value of up to \$105 million.

"Our team is ready to start immediately," said Elmer Nelson, program executive, Lockheed Martin Homeland Security. "We have been working together since October in preparation for the RFP and contract award, and have a corps of experienced trainers ready to go."

The Lockheed Martin team is the number one provider of training to the United States military, and trains thousands of Department of Defense and Federal Government students per year. With a proven record in all aspects of training aviation and law enforcement officials at the state, local and Federal level, the team of industry leaders includes Homeland Security Corporation, Galaxy Scientific Corporation, Windmill International and Oklahoma University.

As part of the effort, passenger screeners will focus on pattern recognition, develop the ability to cope with conflicts and perform duties while being subjected to distractions, and sharpen their skills related to object identification and removal.

As the leading technology solutions provider and integrator to the U.S. government, Lockheed Martin focuses on the defense, information technology and homeland security requirements of the military services and civil agencies. The Corporation's

advanced technology solutions draw on world-class capabilities in systems engineering and integration, complex project management, software development and information technology. These align with emerging homeland security requirements for enhanced command and control, threat information alert and exchange, border control, critical infrastructure protection and emergency management and incident response.
