

Lockheed Martin Delivers Upgraded P-3 Maritime Surveillance Aircraft For U.S. Navy Foreign Military Sale

Corporation's Maritime Surveillance Enterprise Focuses on Continued P-3 Program Integration, Customer Service and Expanding Opportunities With International Customers

EAGAN, Minn.

Lockheed Martin today delivered the 10th upgraded P-3C maritime surveillance aircraft originally contracted by the U.S. Navy's Naval Air Systems Command as part of a foreign military sale to the Royal Netherlands Navy (RNLN).

Under the 2001 contract, Lockheed Martin was awarded more than \$73 million to upgrade 10 P-3C aircraft to a unique customer configuration which included advanced computer processing and mission systems integration capabilities; improved communications systems; and state-of-the-art acoustic and non-acoustic sensors. The first upgraded aircraft was delivered to the U.S. Navy in November 2003.

Lockheed Martin provides the program management, systems engineering, mission systems and sensors for the aircraft, as well as aircraft upgrades and modifications.

Today's delivery highlights the work of Lockheed Martin's Maritime Surveillance Enterprise, a horizontally-integrated team of three Lockheed Martin business units that work on maritime surveillance aircraft for the U.S. Navy, U.S. Customs and Border Patrol, and international P-3 operators. This organization provides P-3 aircraft customers with a single point to sustain, refresh and support the aircraft, as well as access to a cross-functional team working to meet evolving maritime, land and air surveillance customer needs.

"The P-3 has been an exceptionally capable and durable aircraft for U.S. and international operators for more than 40 years," said Rick Kirkland, vice president of Lockheed Martin's Maritime Surveillance Enterprise. "With this history, and with more than 400 P-3 aircrafts in use by U.S. and international operators, we understand how critical it is to create solutions that ensure the continued availability of the P-3 aircraft for many years to come."

The P-3C is the primary maritime surveillance aircraft operated by the U.S. Navy and 15 international allies. Its roles include anti-submarine warfare, anti-surface warfare, overland intelligence, surveillance and reconnaissance, and network-centric warfare, such as command, control and communications. Additionally the capabilities of the P-3C make it an ideal platform for a number of secondary missions, including search and rescue, drug interdiction, airborne early warning and electronic warfare.

"To meet the demands expected to be placed on the aircraft in the years ahead, Lockheed Martin is developing aggressive programs to identify and respond to structural aging issues; providing refresh technology to keep the aircraft's mission capabilities on the cutting edge; and developing systems that operate effectively with other domestic and allied platforms to support the requirements of combatant commanders," added Kirkland.

As prime contractor to the U.S. Navy's Naval Air Systems Command, Lockheed Martin is the prime mission system integrator for the P-3C aircraft's mission avionics, including surveillance sensors, acoustic sensors, weapons control, communication, survivability, displays and controls. Lockheed Martin is a leader in the design, research, development, systems integration and support of mission systems and onboard computing on advanced military aircraft and related technologies. Its customers include U.S. and international military and civilian agencies.

Headquartered in Bethesda, MD, Lockheed Martin employs about 135,000 people worldwide and is principally engaged in the research, design, development, manufacture, integration and sustainment of advanced technology systems, products and services.
