Lockheed Martin Delivers Third Production Remote Multi-Mission Vehicle (RMMV) To U.S. Navy

Provides Significant Capability on Arleigh Burke Destroyers and Littoral Combat Ships

PRNewswire RIVIERA BEACH, Fla.

Lockheed Martin recently delivered the third production Remote Multi-Mission Vehicle (RMMV) to the U.S. Navy, increasing the mine countermeasures capability for both DDG 51 Arleigh Burke class destroyers and the Littoral Combat Ship (LCS). The first and second RMMV were delivered to the Navy in April and August 2007, respectively.

The RMMV is a robust unmanned, semi-submersible, semi-autonomous vehicle that can be adapted to a broad spectrum of applications and missions, including towing variable-depth sensors to detect, localize, classify and identify undersea threats at a safe distance from friendly ships. The RMMV provides all-weather, low-observable operations, high endurance, interchangeable mission system electronics, and real-time data transfer capability beyond line of sight.

The RMMV is the integral mobile subsystem of the Navy's AN/WLD-1 Remote Minehunting System (RMS), which includes the RMMV, a launch and retrieval system for the RMMV, the RMMV-towed sonar sensor, advanced communications equipment and software that integrates RMS into the host ship's combat system. Launched and controlled remotely from forward-deployed ships, the RMMV gives carrier and expeditionary strike groups real-time, over-the-horizon mine reconnaissance capability, keeping the Sailor out of harms way.

In 2005, the Naval Sea Systems Command awarded Lockheed Martin a low-rate initial production contract for three RMMVs; a contract for four more RMMVs was awarded in 2006. The RMMV is produced at Lockheed Martin's Riviera Beach, FL facility.

"The Navy now has a steadily growing capability to detect and classify mines at safe distances because of the RMS program," said Gary Humes, Mine Warfare Program Manager, U.S. Navy Program Executive Office Littoral and Mine Warfare. "This increasing capability keeps the Sailor out of the minefield and helps protect the fleet against the devastation caused by sea mines."

"I am extremely proud of our Lockheed Martin team for successfully reaching this milestone," said Jim Weitzel, vice president of Lockheed Martin's Riviera Beach business unit. "The delivery of this technologically advanced product significantly enhances ship and crew safety sending the vehicle into the danger zone instead."

Headquartered in Bethesda, MD, Lockheed Martin employs about 140,000 people worldwide and is principally engaged in the research, design, development, manufacture, integration and sustainment of advanced technology systems, products and services.
