Lockheed Martin Submits Proposal To Provide GOES-R Spacecraft

Proposal Continues Five Decades of Partnership with NASA & NOAA

PRNewswire DENVER

Lockheed Martin today submitted its proposal to the National Aeronautics and Space Administration (NASA) to design and build the spacecraft for the Geostationary Operational Environmental Satellite - Series R (GOES-R), the next generation geostationary environmental satellites for the National Oceanic and Atmospheric Administration (NOAA).

The proposal builds upon Lockheed Martin's 48 years of successful partnership with NASA and NOAA providing reliable weather and environmental satellite systems on schedule including TIROS, NIMBUS, UARS, Terra and Landsat. In addition, the proposal incorporates knowledge from Lockheed Martin's successful GOES-R Program Definition and Risk Reduction contract.

"By working closely with our customer, our GOES-R team has developed a strong, low-risk proposal that will considerably expand the capability of our nation's weather sentinel," said Joanne Maguire, executive vice president of Lockheed Martin Space Systems Company. "We appreciate the significant value GOES brings to the citizens of our country on a daily basis, and we look forward to partnering with NASA and NOAA to ensure continuity of this valuable asset."

Lockheed Martin's solution builds upon the renowned A2100 geosynchronous spacecraft bus and proven precision imaging capabilities from past remote sensing programs such as IKONOS and the Mars Reconnaissance Orbiter.

"We are the recognized industry leader in space-based sensor integration for Earth remote sensing, planetary, astronomical and intelligence missions, and low-risk, reliable geostationary spacecraft," said Jim Crocker, vice president of Sensing and Exploration Systems at Lockheed Martin Space Systems Company. "Our team is ready to seamlessly transition into the implementation phase of this critical national system."

Data from NOAA's GOES spacecraft provide accurate real-time advance weather warning products to the commercial, educational, and public sectors to protect lives, property and the environment, and to foster economic growth and promote educational research. The future GOES-R mission will improve the quality and timeliness of its forecasts, thereby generating significant economic benefits to the nation in the areas of weather and water, climate, ecosystems monitoring and management, and commerce and transportation.

The contract is scheduled to be awarded by NASA Goddard Space Flight Center in late 2008, and will include two GOES-R satellites -- with first delivery in 2014 -- and options for two more spacecraft. The total program value is expected to exceed one billion dollars.

Lockheed Martin Space Systems Company, a major operating unit of Lockheed Martin Corporation, designs, develops, tests, manufactures and operates a full spectrum of advanced-technology systems for national security, civil and commercial customers. Chief products include human space flight systems; a full range of remote sensing, navigation, meteorological and communications satellites and instruments; space observatories and interplanetary spacecraft; laser radar; fleet ballistic missiles; and missile defense systems.

Headquartered in Bethesda, Md., Lockheed Martin employs about 140,000 people worldwide and is principally engaged in the research, design, development, manufacture, integration and sustainment of advanced technology systems, products and services. The Corporation reported 2007 sales of \$41.9 billion.
