Lockheed Martin To Support U.S. Navy's Space And Warfare Systems Center Pacific

Lockheed Martin is one of two companies awarded a contract by the U.S. Navy's Space and Naval Warfare Systems Center Pacific (SPAWAR Systems Center Pacific) to provide installation and engineering support to the SPAWAR Systems Center Pacific field activity in Hawaii.

Under this new indefinite-delivery-indefinite-quantity (IDIQ) contract, Lockheed Martin will offer a range of technical services to SPAWAR Systems Center Pacific at shore stations throughout the world and onboard U.S. ships in port and at sea. The main focus of these activities will be U.S. Navy operations in the Pacific Rim, including Hawaii, Guam, Japan and Singapore.

Lockheed Martin and another company were selected to compete for up to $5.1 million during the one-year contract. The government may award up to four one-year option periods as well.

The areas of work covered by this contract include engineering, fabrication, installation, logistics and administrative support, design, testing and evaluation, and rapid prototype development. Lockheed Martin will also manage the acquisition of commercial-off-the-shelf items utilized in turnkey operations of sophisticated electronics and communications equipment and systems. This award continues a long and productive partnership between the corporation and the Space and Naval Warfare Systems Command.

"Lockheed Martin is proud to expand our relationship with SPAWAR Systems Center Pacific, and we are committed to building on our collective successes through this new opportunity with the Hawaii field activity," said Carey Smith, Vice President of Lockheed Martin's Technical Services. "We are pleased that our solutions offer the highest technical quality at the lowest risk and with optimal staffing."

Headquartered in Bethesda, MD, Lockheed Martin is a global security company that employs about 140,000 people worldwide and is principally engaged in the research, design, development, manufacture, integration and sustainment of advanced technology systems, products and services. The corporation reported 2007 sales of $41.9 billion.
