## Lockheed Martin SBIRS Team Advancing To Follow-On Production Phase

PRNewswire SUNNYVALE, Calif.

The Lockheed Martin Space-Based Infrared System (SBIRS) team has submitted its proposal for the program's follow-on production phase and has completed a major Preliminary Design Review (PDR) milestone with the U.S. Air Force.

The SBIRS program is designed to provide early warning of missile launches, and simultaneously support other missions including missile defense, technical intelligence and battlespace awareness.

The SBIRS Follow-on Program, which will complete the SBIRS constellation, will add the third and fourth highly elliptical orbit (HEO) payloads as well as the third and an option for a fourth geosynchronous orbit (GEO) spacecraft.

The proposal, submitted on March 22, builds on the experience of prime contractor Lockheed Martin Space Systems, Sunnyvale, Calif., and payload integrator, Northrop Grumman, Azusa, Calif. in providing the SBIRS development program for the Space Based Infrared Systems Wing at the U.S. Air Force Space and Missile Systems Center, Los Angeles Air Force Base, Calif.

"With the submission of the full production proposal for the SBIRS follow-on program, the joint government-industry team is another step closer to making the planned constellation of this critical system a reality," said Col. Roger Teague the U.S. Air Force SBIRS Wing Commander. "I salute the entire SBIRS team for their dedication and hard work and look forward to future mission success."

Working under an initial \$370 million contract for advanced procurement phase, the team has successfully completed PDRs for the HEO & GEO payloads and systems along with critical components and subsystems. With the completion of the SBIRS follow on program PDR phase, the program team will transition to the Critical Design Review (CDR) stage, followed by the production phase.

"Successful completion of the PDR phase will allow us to move efficiently into the next phase of this essential program," said Jeff Smith, Lockheed Martin's SBIRS Vice President. "We look forward to building on our close customer partnership as we strive to achieve operational excellence on this critical system."

Lockheed Martin's current SBIRS contract includes the two HEO payloads now on-orbit, two GEO satellites, as well as ground-based assets to receive and process the infrared data. Contract award for the additional GEO spacecraft and HEO payloads is expected in late 2009.

Headquartered in Bethesda, Md., Lockheed Martin is a global security company that employs about 146,000 people worldwide and is principally engaged in the research, design, development, manufacture, integration and sustainment of advanced technology systems, products and services. The corporation reported 2008 sales of \$42.7 billion.
