

Lockheed Martin Awarded \$23 Million For Production Of JASSM-Extended Range Test Missiles

PRNewswire
ORLANDO, Fla.

Lockheed Martin was awarded a \$23 million contract for production of 12 Joint Air-to-Surface Standoff Missile-Extended Range (JASSM-ER) test missiles to be used in flights tests. Six of the missiles will be used to complete the development test flight program, with the remaining six to be used in operational tests.

All of the missiles will be tactically configured with an added test instrumentation kit. The missiles are assembled in Lockheed Martin's award-winning missile assembly facility in Pike County, AL.

"These tests will demonstrate the maturity of the JASSM-ER design, and support the Milestone C decision to proceed with low rate initial production of the missile," said Alan Jackson, director of the JASSM and JASSM-ER programs at Lockheed Martin Missiles and Fire Control.

The flight tests will be launched from a B-1B aircraft and engage various tactical targets. JASSM-ER has a 100 percent success rate, currently four-for-four in developmental flight tests.

The development and procurement of JASSM-ER is a key element of the B-1B reinvestment strategy. The additional range provided by the JASSM-ER variant benefits the B-1B with responsive, precision-engagement capability, while remaining clear of highly-defended airspace and beyond the range of long-range, surface-to-air missiles.

One of the primary JASSM-ER program objectives is to provide the Warfighter with a significant operational capability more than 2.5 times the baseline missile range. The JASSM-ER maintains the same outer mold line, survivability and lethality of the baseline JASSM missile.

A 2,000-pound class weapon with a dual-mode penetrator and blast fragmentation warhead, JASSM cruises autonomously in adverse weather, day or night, using a state-of-the-art infrared seeker in addition to the enhanced digital anti-jam Global Positioning System (GPS) receiver to find a specific aimpoint on the target. Its stealthy airframe makes it extremely difficult for air defense systems to engage. The JASSM-ER missile design will be compatible with the threshold B-1B platform, as well as the B-2, B-52 and F-16 aircraft that currently employ JASSM.

Headquartered in Bethesda, Md., Lockheed Martin is a global security company that employs about 146,000 people worldwide and is principally engaged in the research, design, development, manufacture, integration and sustainment of advanced technology systems, products and services. The corporation reported 2008 sales of \$42.7 billion.
