

# Lockheed Martin Delivers First Production F-35 Electro-Optical Targeting System

PRNewswire  
ORLANDO, Fla.

Lockheed Martin has marked successful entry into low rate initial production on the F-35 Lightning II Electro-Optical Targeting System (EOTS). The first production units have been delivered to Lockheed Martin Aeronautics in Fort Worth, TX, for integration onto the aircraft.

Embedded into the F-35's fuselage with an innovative faceted sapphire window, the low-drag, stealthy EOTS is the world's first and only sensor combining forward-looking infrared and infrared search and track functionality. The F-35 EOTS will provide Lightning II pilots with significant air-to-air and air-to-ground situational awareness in a single compact and completely passive sensor.

"Our team looks forward to meeting its commitment to provide a superior targeting system to F-35 pilots around the world as we gear up to produce more than 3,000 units," said Rich Hinkle, program director of F-35 Lightning II EOTS at Lockheed Martin Missiles and Fire Control. "This delivery marks a pivotal achievement for the EOTS as we transition from a system design and development program to a production program."

The F-35 EOTS production is ramping up to produce up to 200 units a year. "The outlook for the F-35 program is very strong," Hinkle said. "Our success in supporting the program is vital to the F-35's mission to provide dominant airpower across the full air-to-air, air-to-ground mission spectrum."

The latest generation infrared sensor technology, the F-35 EOTS builds upon the success of Lockheed Martin's Sniper® Advanced Targeting Pod to provide high-resolution imagery, automatic target tracking, infrared-search-and-track, laser designation and range finding, as well as laser spot tracking--all at greatly increased standoff ranges. Modular components allow the F-35 EOTS to be maintained on the flight line for true two-level maintenance.

Headquartered in Bethesda, Md., Lockheed Martin is a global security company that employs about 140,000 people worldwide and is principally engaged in the research, design, development, manufacture, integration and sustainment of advanced technology systems, products and services. The corporation reported 2008 sales of \$42.7 billion.
