# U.S.-South Korean Exercise Debuts Lockheed Martin Simulation Program

PRNewswire
ORLANDO, Fla.

Lockheed Martin's Warfighters' Simulation (WARSIM) program delivered realistic division Warfighter results during its debut in a recent command post exercise conducted by the U.S. Army's Second Infantry Division (2ID) and the Republic of Korea Army.

Designed to integrate simulations into the Army's full-spectrum training plans, WARSIM enabled a training scenario for battle commanders, battle staffs, and other units in South Korea, simultaneously with the U.S. Army's Combined Arms Center at Fort Leavenworth, Kan., and its Combined Arms Support Command at Fort Lee, Va. More than 200 U.S. and Korean role-players participated in the exercise, using WARSIM to execute orders of commanders at the brigade and division level.

"It simulates the lethal and complex interactions of the battlefield and integrates ground, air, ballistic missile and intelligence models," said Markee White, Lockheed Martin WARSIM program manager. "WARSIM's ease of use was demonstrated by how quickly the Republic of Korea Army participants were able to use the simulation in a coalition, multi-lingual environment."

The 2ID was the first Army division to use WARSIM to successfully achieve their training objectives. WARSIM, which was originally initiated under a contract in 1996, is designed to simulate all levels of conflict - from major theater-level operations to stability and support operations at the brigade, joint and coalition level. WARSIM supports these exercises for U.S. Army, joint and coalition training. Lockheed Martin developed laptop, transportable and battle simulation center configurations of WARSIM that can be tailored for specific training needs. The first system delivery to PEO STRI took place in January 2005. Development work, post deployment software support, additional fieldings and Army Exercise support will continue through September 2011. The program value was $419 million through 2009.

Headquartered in Bethesda, Md., Lockheed Martin is a global security company that employs about 140,000 people worldwide and is principally engaged in the research, design, development, manufacture, integration and sustainment of advanced technology systems, products and services. The Corporation reported 2009 sales of $45.2 billion.
