

## Lockheed Martin Receives JASSM® Contract For Integration Onto Finnish Air Force F-18

PR Newswire  
ORLANDO, Fla.

ORLANDO, Fla., Dec. 3, 2012 /[PRNewswire](#)/ -- Lockheed Martin (NYSE: LMT) received a \$5.1 million Foreign Military Sale contract from the U.S. Air Force to support integration of the [Joint Air-to-Surface Standoff Missile](#) (JASSM) onto the Finnish Air Force (FiAF) F-18C/D aircraft.

The contract is for the first phase of a six-year effort of software development and aircraft integration support. Additional contract awards are expected for remaining phases of integration support, missile procurement and post-production support. Finland is the second international customer for JASSM, following the Commonwealth of Australia, which became the first export customer in February 2006.

"JASSM plays a critical role in giving allied warfighters the operational flexibility, reliability and effectiveness necessary to complete their missions," said Alan Jackson, director of strike systems in Lockheed Martin's Missiles and Fire Control business. "The team has worked hard to be able to deliver this vital and affordable capability to our allied partners."

JASSM integration will coincide with the FiAF Mid-Life Two upgrade of their F-18 aircraft. The U.S. Navy will lead the integration effort in coordination with the U.S. Air Force, Lockheed Martin and the FiAF. Integration activities will take place at the Naval Air Warfare Center Weapons Division in China Lake, Calif.

The award aligns with the recent JASSM Production Lot 10 procurement contract to employ economies of scale, reducing cost for both the U.S. Government and Finland. JASSM on the F-18C/D enables Finland to fulfill its regional defense role, as well as its European community and North Atlantic Treaty Organization's (NATO) Partnership for Peace responsibilities.

The contract award follows several recent JASSM program milestones, including the Lot 10 contract award, certification of JASSM on the Royal Australian Air Force F/A-18 and successful integration on the U.S. Air Force F-15E.

JASSM is an autonomous, air-to-ground, precision-guided standoff missile designed to meet the needs of U.S. and allied warfighters. Armed with a penetrator and blast fragmentation warhead, JASSM cruises autonomously, day or night in all weather conditions. The missile employs an infrared seeker and enhanced digital anti-jam Global Positioning System to find specific points on targets.

The stealthy JASSM is integrated on the U.S. Air Force's B-1, B-2, B-52, F-16 and F-15E. Internationally, JASSM is certified on the F/A-18A/B for the Royal Australian Air Force.

Future integration efforts will focus on the U.S. and international versions of the Lockheed Martin F-35 Lightning II fighter aircraft and other international platforms.

Produced at the company's manufacturing facility in Troy, Ala., Lockheed Martin has assembled more than 1,100 JASSMs for testing and operational use toward a total objective of 4,900 JASSM missiles.

Headquartered in Bethesda, Md., Lockheed Martin is a global security company that employs about 120,000 people worldwide and is principally engaged in the research, design, development, manufacture, integration and sustainment of advanced technology systems, products and services. The corporation's net sales for 2011 were \$46.5 billion.
