

Lockheed Martin Awarded \$20 Million Contract To Continue Supporting NORAD Space Defense Missions

COLORADO SPRINGS, Colo., Sept. 18, 2013 /PRNewswire/ -- Lockheed Martin (NYSE: LMT) will continue supporting the air, space defense and missile warning missions for the North American Aerospace Defense Command (NORAD) Cheyenne Mountain Complex under a \$20 million contract modification to the Integrated Space Command and Control (ISC2) program.

Under this option, awarded by the U.S. Air Force Life Cycle Management Center (AFLCMC), Lockheed Martin will continue to sustain these critical national defense missions at multiple locations worldwide. This is the second option exercised from the contract awarded in October 2012.

ISC2 is the common, interoperable C2 enterprise that supports multiple missions for NORAD, U.S. Strategic Command and the U.S. Northern Command. By integrating these regional combatant commands under a single strategic command and control system, ISC2 enables different combatant commanders to easily interoperate with each other and other echelons of joint military leadership.

"We are proud to support our nation's missile warning mission," said Rob Smith, vice president for Space & Cyber at Lockheed Martin's Information Systems & Global Solutions. "We'll work with our customer to ensure that ISC2 remains the critical link in enabling geographically disparate commanders to monitor and assess multi-mission threats concurrently."

Under the sustainment contract, Lockheed Martin supports ISC2 space, air defense and missile warning missions, ensuring that data is seamlessly shared between those and other C2 systems. The air defense and missile warning missions are part of the integrated tactical warning attack assessment mission, which provides warning to the President if North America is under attack. The space mission system is used to catalog space objects and perform conjunction assessments to provide manned space flight safety and protect other key space assets.

As the prime contractor for the ISC2 program, Lockheed Martin modernized the U.S. Air Force's air defense, missile warning, and space command and control information technology infrastructure, integrated and replaced more than 30 legacy systems. Since 2000, Lockheed Martin has supported components of the ISC2 system around the world. The system has personnel at Offutt Air Force Base, Peterson Air Force Base, Vandenberg Air Force Base, Cheyenne Mountain Air Force Station, as well as other locations. Work on the ISC2 contract is performed at Colorado Springs, Colo.

Headquartered in Bethesda, Md., Lockheed Martin is a global security and aerospace company that employs about 116,000 people worldwide and is principally engaged in the research, design, development, manufacture, integration, and sustainment of advanced technology systems, products, and services. The Corporation's net sales for 2012 were \$47.2 billion.
