

# PAC-3 MSE Test Successful From Remote Launcher

DALLAS, Sept. 21, 2017 /[PRNewswire](#)/ -- A Lockheed Martin (NYSE: LMT) PAC-3 Missile Segment Enhancement (MSE) interceptor successfully intercepted a tactical ballistic missile target on Saturday in the first-ever MSE test from a remote launcher.

As part of a U.S. Army-led missile defense flight test at the Reagan Test Site at the Kwajalein Atoll in the Marshall Islands, the test demonstrated the expanded defended footprint available by deploying the launcher remotely from the Patriot radar. It also confirmed PAC-3 MSE's unique ability to detect, track and intercept an incoming threat.

"PAC-3 continues to be successful against today's evolving threats, and it remains the only combat proven hit-to-kill interceptor in the world," said Scott Arnold, vice president and deputy of Integrated Air and Missile Defense at Lockheed Martin Missiles and Fire Control. "Today's global security environment demands reliable solutions. We expect PAC-3 MSE interceptors to continue serving as an integral layer of defense in the protection of armed forces personnel, citizens and infrastructure."

The upgraded PAC-3 MSE expands the lethal battlespace with a dual-pulse solid rocket motor, providing increased performance in altitude and range. PAC-3 MSE is a high-velocity interceptor that defends against incoming threats, including tactical ballistic missiles, cruise missiles and aircraft. The missile uses Hit-to-Kill technology, which defeats threats through kinetic energy via body-to-body contact.

Building on the battle-proven PAC-3 CRI Missile, PAC-3 MSE brings larger control fins and an upgraded support system, in addition to its dual-pulse motor. The enhancements extend the missile's reach and dramatically improve performance against evolving missile threats.

As a world leader in systems integration and development of air and missile defense systems and technologies, Lockheed Martin delivers high-quality missile defense solutions that protect citizens, critical assets and deployed forces from current and future threats. The company's experience spans missile design and production, infrared seekers, command and control/battle management, and communications, precision pointing and tracking optics, radar and signal processing, as well as threat-representative targets for missile defense tests

## About Lockheed Martin

Headquartered in Bethesda, Maryland, Lockheed Martin is a global security and aerospace company that employs approximately 97,000 people worldwide and is principally engaged in the research, design, development, manufacture, integration and sustainment of advanced technology systems, products and services.
