

Lockheed Martin Supports Critical Weather Forecasting Mission With Second Next-Generation Weather Satellite

NOAA Continues to Advance Current Weather Satellite Constellation with the Successful Launch of GOES-S Satellite

CAPE CANAVERAL AIR FORCE STATION, Fla., March 1, 2018 /[PRNewswire](#)/ -- A satellite launched today will augment the GOES-16 weather satellite and provide broad coverage with powerful new weather monitoring technology for meteorologists to provide life and property-saving forecasts. Today, at 5:02 p.m. ET, NOAA's GOES-S weather satellite, built by Lockheed Martin (NYSE: LMT), was launched aboard a United Launch Alliance Atlas V 541 rocket and has successfully established communications.

NOAA's next weather satellite in the Geostationary Operational Environmental Satellite - R Series, GOES-S, which will be renamed GOES-17 upon reaching geostationary orbit, will be positioned to boost forecast accuracy for the West Coast, Alaska and Hawaii. With data from GOES-17, and the already operational GOES-16, the two satellites will observe most of the Western Hemisphere. These satellites will continue to deliver dazzling weather data that has captivated forecasters such as [first-of-its-kind lightning mapping](#) and [high-definition views of weather systems](#). This sophisticated information will support short-term weather forecasts and severe storm warnings, maritime forecasts, and space weather predictions. Additionally, the technology will improve hurricane tracking and intensity forecasts, increase thunderstorm and tornado warning lead time and improve wildfire detection.

"GOES-S increases the coverage of our nation and will contribute to the quality and timeliness of weather data – but it is also more than that," said Tim Gasparrini, GOES-R vice president and program manager at Lockheed Martin Space. "As is evident with the performance of GOES-16 on orbit, we are gaining insight into our weather like never before. The extended application of this data is expected to have a large impact on industries like shipping and logistics, aviation, transportation and more."

Lockheed Martin designed, built and tested the satellite and is responsible for spacecraft launch processing. In addition to all four GOES-R Series satellites (R, S, T and U), Lockheed Martin also designed and built the Solar Ultraviolet Imager ([SUVI](#)) and the Geostationary Lightning Mapper ([GLM](#)) instruments that will fly aboard each spacecraft.

[NOAA](#) funds, manages and plans to operate the GOES-R Series satellites. [NASA](#) oversees the acquisition and development of the GOES-R Series spacecraft, instruments and launch vehicle for NOAA. NASA's Launch Services Program at [Kennedy Space Center](#) is responsible for launch management. The program is co-located at NASA's [Goddard Space Flight Center](#) in Greenbelt, Maryland.

About Lockheed Martin

Headquartered in Bethesda, Maryland, Lockheed Martin is a global security and aerospace company that employs approximately 100,000 people worldwide and is principally engaged in the research, design, development, manufacture, integration and sustainment of advanced technology systems, products and services.
