Lockheed Martin-Built F-35 Comes Home To RAF Marham

First transformational 5th generation aircraft arrive for UK's Lightning Squadron

RAF MARHAM, NORFOLK, United Kingdom, June 6, 2018 /PRNewswire/ -- The United Kingdom has welcomed home its first four F-35B advanced fighter aircraft, which will be flown by the Royal Air Force and Royal Navy.

With the aid of air-to-air refueling, the aircraft flew non-stop across the Atlantic from the U.S. Marine Corps Air Station in Beaufort, South Carolina where UK pilots have been undergoing intensive training on the aircraft in partnership with their USMC counterparts.

With stealth technology, advanced sensors, weapons capacity and range, the F-35 is the most lethal, survivable and connected fighter aircraft ever built. More than a fighter jet, the F-35's ability to collect, analyze and share data is a powerful force multiplier enhancing all airborne, surface and ground-based assets in the battlespace.

"This aircraft will truly transform how the UK conducts its defence operations and it is fitting that the next generation of combat air power has arrived as the RAF celebrates its centenary," said Peter Ruddock, Chief Executive, Lockheed Martin UK. "As a key partner in the F-35 programme from its early stages, the UK has been instrumental in shaping the design and development of the aircraft, particularly in relation to the short take-off and vertical landing capabilities."

The programme has also greatly benefitted UK industry with more than 500 British companies involved in the supply chain. Around 15 percent by value of each of the more than 3,000 F-35 aircraft projected on the programme is manufactured in the UK, and to date the programme has generated about US $13 billion in contracts for British suppliers.

The aircraft have arrived two months ahead of schedule which will allow the UK's Lightning Force to focus on achieving initial operational capability by the end of 2018. The first flight trials with the UK's Queen Elizabeth Class aircraft carriers are expected later this year.

Comprehensive sustainment support for the UK's fleet of F-35 aircraft based at RAF Marham will be provided by Lightning Team UK, which represents the blended industry team of BAE Systems, Lockheed Martin, Pratt & Whitney and Rolls Royce.

The UK currently has 15 F-35B aircraft in total, the remainder of which are stationed at MCAS Beaufort or Edwards Air Force Base in California, where they are involved in testing and training.

Around the world, there are now nearly 300 F-35 aircraft operating from 15 bases globally and the programme has achieved more than 140,000 flight hours.
