

New Lockheed Martin-Built Protected Communications Satellite Confirmed Online In Orbit Following Successful Launch

Fourth Satellite Will Complete Global Coverage for Advanced Extremely High Frequency Constellation

CAPE CANAVERAL AIR FORCE STATION, Fla., Oct. 17, 2018 /PRNewswire/ -- The fourth Advanced Extremely High Frequency (AEHF) protected communication satellite, built by Lockheed Martin (NYSE: LMT) for the U.S. Air Force, was successfully launched today at 12:15 a.m. from Cape Canaveral Air Force Station aboard a United Launch Alliance Atlas V 551 rocket. Lockheed Martin confirmed signal acquisition at 3:47 a.m. ET.

The [AEHF](#) system provides global, survivable, highly secure and protected communications for strategic command and tactical warfighters operating on ground, sea and air platforms. The satellite will now move into a testing phase prior to hand over to the Air Force. With four satellites in orbit, the AEHF constellation completes a geostationary ring and will be able to deliver global coverage.

"It's good to return with our mission partners to see the culmination of expertise, skill and partnership that we have worked diligently toward to make this AEHF launch a success," said Mike Cacheiro, vice president of Protected Communication Systems at Lockheed Martin. "This is a substantial milestone for AEHF, and as we look ahead, we continue to improve and upgrade this mission to deliver these vital communications capabilities to the Air Force."

AEHF also serves international partners including Canada, the Netherlands and the United Kingdom.

Lockheed Martin is on contract with the Air Force to deliver the fifth and sixth satellites and upgraded the Mission Planning ground system. Lockheed Martin contributed payload system engineering, mission control ground software, solar arrays and the LM A2100 spacecraft bus, which is a dependable and low-risk platform for commercial, civil and military satellites. All AEHF satellites are assembled at the company's Sunnyvale, Calif. facility.

One AEHF satellite provides greater total capacity than the entire legacy five-satellite [Milstar](#) constellation. Individual data rates increase five-fold, permitting transmission of tactical military communications, such as real-time video, battlefield maps and targeting data. In addition, AEHF affords national leaders anti-jam, always-on connectivity during all levels of conflict.

The AEHF team includes the U.S. Air Force Military Satellite Communications Systems Directorate at the Space and Missile Systems Center, Los Angeles Air Force Base, Calif. Lockheed Martin Space Systems Company, Sunnyvale, Calif., is the AEHF prime contractor, space and ground segments provider as well as system integrator, with Northrop Grumman Aerospace Systems, Redondo Beach, Calif., as the payload provider.
