

Hybrid Airship Enters The Transfer Portal

Artist's rendition of the Hybrid Airship landing in a remote location.

Lockheed Martin (NYSE: LMT) believes in the potential for hybrid airships to transform global transport. For some time, we have been in search of a transition partner to continue development of this important commercial work. We are pleased to share that the hybrid airship IP and related assets have been transitioned to a newly formed, commercial company called AT² Aerospace.

AT² Aerospace, based in Santa Clarita, California, is extending our work to bring hybrid airships to fruition. The AT² team is developing airship solutions to support commercial and humanitarian applications around the world. Dr. Robert Boyd, retired Lockheed Martin Hybrid Airship program manager, is president and chief operating officer of AT² Aerospace.

AT² can be found at www.at2aero.space and directly by email at info@at2aero.space.
